Asset Divestment Consultants

An opportunity to acquire a modern, high capacity Strachan & Henshaw Ltd. UK (Now Metso) luffing, slewing and travelling stacker at a significant time and cost saving compared with new infrastructure.

High performance system designed for coal – adaptable for iron ore and other bulk products. The equipment is located in Australia close to a port. The equipment has been dismantled, preserved and stored ready for shipment worldwide.

The owners of the equipment shown in this brochure have provided the following information and specifications.

STACKER

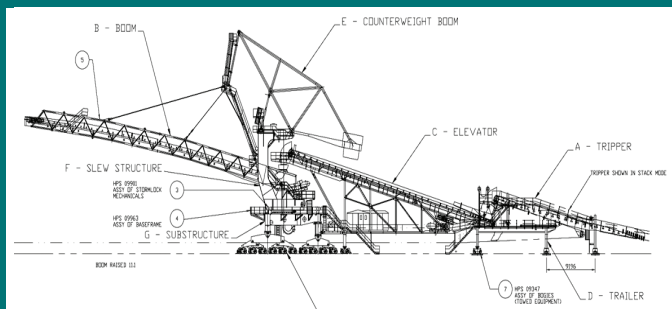

Commissioned in late 1997, the machine has been well maintained and is currently dismantled and preserved in Australia very close to a port ready for export. This allows it to be brought into service in the shortest possible time at the new project site in a simple, rapid operation.

INVESTMENT OPPORTUNITY

The availability of this world-class Strachan & Henshaw Ltd. (UK) designed stacker presents a rare investment opportunity for major exporters, emerging coal or mineral producers and port owners seeking to bring their new or brownfields expansion projects into operation in the shortest possible time.

HIGHLIGHTS

- High capacity equipment designed for coal, but adaptable for iron ore, and other dry bulk products.
- Fully automated, well-proven Strachan & Henshaw UK (now Metso) design – many other machines of this design are successfully operating around the world.
- Significant lead time and cost savings, potential to enhance project NPV.
